

ROSHAN GEDAM

Software Engineer | Java Developer | Full-Stack Developer

 roshangedam1998@gmail.com  +91 7028858669  LinkedIn  GitHub  SourceForge  Nagpur, MH

PROFESSIONAL SUMMARY

Results-driven Software Engineer with 3+ years building scalable healthcare ERP solutions (HMIS) serving 10,000+ daily users across 5+ facilities. Expert in system architecture, Spring Boot, and third-party API integrations (Salesforce, Duty Roster). Delivered 40% performance improvements and 99.5% system uptime. Active open-source contributor with 100+ downloads across GitHub and Maven Central.

TECHNICAL SKILLS

Languages & Frameworks

Java, J2EE, Spring Boot, Spring Security, OAuth2 Hibernate, JPA, JSF, Angular, JavaScript, Python, C/C++

Databases & Caching

MySQL, PL/SQL, Redis, MongoDB

Testing & Quality

JUnit, Mockito, Integration Testing, Performance Testing

Cloud & DevOps

GCP, Linux (Ubuntu/RedHat) – log analysis, deployment operations, Docker, Git, GitLab, GitHub, CI/CD

Architecture & APIs

Microservices, RESTful APIs, SOAP, OpenAPI, MVC, Event-Driven

Tools & Methodologies

Kafka, Maven, SOLID Principles, Design Patterns, Agile/Scrum

PROFESSIONAL EXPERIENCE

Software Engineer

May 2022 - Present (3+ Years)

Micropro Software Solutions – Java Developer

Healthcare Domain - HMIS (Hospital Management Information System)

- Designed and integrated Salesforce API for bidirectional patient data synchronization across NICU, Mother-Baby, and Circumcision modules, automating data flow and eliminating 90% manual entry errors
- Developed REST API integration with third-party Duty Roster software, enabling automated scheduling for 200+ healthcare staff members and reducing administrative workload by 70%
- Led client requirement analysis sessions, collaborating directly with hospital administrators to gather specifications, prioritize features, and deploy customized HMIS enhancements serving 25,000+ patients monthly
- Engineered 10 core healthcare modules (Frontdesk, Clinical Section, Nursing, Service Center, ADT, OT, Store, Pharmacy, Insurance, Finance) using Java, Spring Boot, JSF, and JPA, handling 10,000+ concurrent users with sub-500ms response times
- Implemented SNOMED CT code integration module for standardized clinical terminology, processing 10,000+ records daily with 99.7% accuracy and ensuring HIPAA compliance
- Built secure RESTful APIs for authorized server data sync, improving data accuracy by 30% and reducing data discrepancies by 60% through validation layers
- Optimized PL/SQL stored procedures and implemented Redis caching, reducing report generation time from 15 minutes to 2 minutes (87% improvement)
- Achieved 85% code coverage through comprehensive JUnit and Mockito testing, reducing production bugs by 40% and ensuring system stability
- Integrated SOAP/REST APIs for third-party insurance verification systems, automating claim processing and reducing turnaround time by 50%

Tech: Java/J2EE, Spring Boot, PL/SQL, JSF, Multi-threading, Maven, Git, HTML5, CSS, JS, Agile/Scrum

KEY ACHIEVEMENTS

- ★ Integrated Salesforce API for real-time patient data sync (NICU, Mother-Baby, Circumcision modules), processing 1,000+ records daily with 99% accuracy
- ★ Built third-party Duty Roster API integration enabling automated staff scheduling for 200+ doctors/nurses, reducing manual effort by 70%
- ★ Architected SNOMED CT integration processing 10,000+ medical records daily, reducing data errors by 45% and improving interoperability by 30%
- ★ Optimized database queries reducing API response time from 3.2s to 480ms (85% improvement), enhancing user experience significantly
- ★ Led client meetings and requirement gathering for HMIS enhancements, deployed 12+ feature releases on schedule with cross-functional teams

OPEN SOURCE PROJECTS

NetSpeed - Internet Speed Monitor

1,00+ Downloads | GitHub & SourceForge

Java-based real-time network monitoring widget for Windows with customizable UI and minimal resource usage (<50MB RAM). Features live upload/download tracking with GitHub.

Tech: Java, Swing, OSHI Library, Windows API

JayoMail - Email Utility Library

10+ Downloads | Maven Central | GitHub

Open-source Java email library with modular architecture supporting multiple providers (SMTP, Gmail, Outlook). Published on Maven Central with attachment support and HTML templates.

Tech: Java, Maven, JavaMail API, Design Patterns

PayoMail - Python Email Utility

PyPI | GitHub

Flexible Python package for email operations with strategy pattern, unified interface for multiple providers, and 90% test coverage.

Tech: Python, PyPI, SMTP, Strategy Pattern

EDUCATION & CERTIFICATIONS

Bachelor of Science (B.Sc) in Computer Science

2018 - 2021

Tai Golwalkar Mahavidyalay, Ramtek | RTMNU Nagpur University
